

Product Name :
Compression-Flexure Cement Testing Frames

Product Code :
ENGLABINGCAG3900036

Description :

Compression-Flexure Cement Testing Frames

Technical Specification :

Two versions are available:

Single compression station, 500 kN or 600 kN cap.: for compression tests on low strength specimens.

Double station model, 600/15 kN or 500/15 kN cap.: extends the possible applications to flexural tests on cement and compression tests on low strength specimens.

Compression-flexure cement testing frames

High rigidity: solid one piece steel frame

Universal compression testers, in practice, suitable to house various accessories for testing cement, mortar, resins and other materials.

Large testing space

Best quality/price ratio

Frames and compression platens High rigidity: solid one piece steel frame.

Spherical seat allows free alignment at the initial contact with the specimen.

Pedestal not included.
