Product Name : Industrial Automation Network Communication Trainer	**Product Code :** ENGLABINGCAG5000003

Description :

Industrial Automation Network Communication Trainer

Technical Specification :

The training platform adopts an aluminum profile column frame structure, and the bottom of the training platform is equipped with universal wheels for flexible movement. Various modules are placed on the panel, easy to use and not easy to damage.

There are various types of communication modules, which can be combined and used in a variety of ways.

The overall structure adopts open and disassembly type, which can easily replace the modules. The content of the modules is determined according to the principles of productive functions and integrated learning functions, so that the required modules can be easily selected during teaching or competition.

The training and assessment device is a low-voltage component, which is safe to use.
