Product Name:

MOT Control of a DC Motor

Product Code: ENGLABINGCAG8000000

Description:

MOT Control of a DC Motor

Technical Specification:

This laboratory is designed for the study of Control of a DCmotor to allow the student a practical training, based on the performance ofguided experiments. Industrial type components must be educationally adapted byusing a modular panel system to permit the step by step assembling from the simplest circuit to the most complex system. This trainer has a modular structure and it consists of didactic panels installed on a vertical frame. It is supplied with a theoretical and practical manual. The modularity of this didactic system can give the students a direct and immediate approach to the topics, offering the opportunity to study various subjects, performing several experiments as following:

P, PI and PID controls of the speed of a DC motor using the CHR method Control of a DC generator

Engineering Lab Equipment India
