Product Name :
Mechanical Systems

Product Code :
ENGLABINGCAG13400003

Description :

Mechanical Systems

Technical Specification :

Mechanical Systems 1 Learning System builds basic mechanical technical knowledge by focusing on the fundamentals of basic mechanisms and simple mechanical systems. Mechanical Systems 1 Learning System is ideal for future technicians and engineers because it begins with the building blocks of mechanical systems, first conceptually with topics like force, and then continues with hands-on skill-building with components like levers, wheels, and inclined planes.

Combining theory with skills and components, learners will practice constructing various mechanical systems, taking various measurements, and making a wide array of calculations.

The Mechanical Systems 1 Learning System workstation features level 1 and level 2 mechanical components including linkages, cams, turnbuckles, pulleys, and gears. Mechanical Systems 1 Learning System also includes strong mechanical curriculum with a stunning depth and breadth of knowledge that shows how mechanical concepts are applied in real-world applications such as gear trains, wiper linkages, hoists, and many more.

Features of Mechanical Systems 1 Learning System

- Basic mechanical technical knowledge
- Ideal for future technicians and engineers
- Covers basics like force,
- Multiple hands-on skills
- Durable, user-friendly system

Interactive multimedia included
Optional virtual trainer
