Product Name :
Electro Stimulation

Product Code :
ENGLABINGCAG14900013

Description :

Electro Stimulation

Technical Specification :

The Electro Stimulation, or the involuntary muscular contraction that is caused by electrical pulses, is a practice used both in rehabilitation and in sport or fitness. It causes selective muscular contractions, more powerful and extended than those that are possible through voluntary efforts; it allows, without physical efforts, amazing results such as the increase of the tone and of the volume of the muscles; it increases the metabolism of the fats with consequent reduction of the adipose zones; it tones up the muscles and it progressively reactivates the functionalities of limbs that need re-education.

Theoretical topics of Electro Stimulation
Biomedical techniques for the Electro Stimulation
The Electro Stimulation for passive gymnastics
The Electro Stimulation

Circuit blocks of Electro Stimulation
Main therapeutical effects in sport and beauty fields
Typical circuit that is used in of Electro Stimulation

Engineering Lab Equipment India
