Product Name :
Transducers And Automation Modular Laboratory

Product Code :
ENGLABINGCAG800002

Description :

Transducers And Automation Modular Laboratory

Technical Specification :

The Transducers And Automation Modular Laboratory is an extremely flexible and efficient modular training system for the study of industrial transducers and relevant electronic circuits of signal conditioning and conversion.

A Personal Computer Data Acquisition System is also available in order to allow the computerized measurements to determine the transducer characteristics.

By means of its modular composition, it is possible to choose the optimal configuration according to any specific educational requirements and available budget.

The possibility of further integrations or updating in the future is obviously ensured.
