Product Name :
Analogue Input Output Simulator

Product Code :
ENGLABINGCAG8000010

Description :

Analogue Input Output Simulator

Technical Specification :

The simulator is essential and indispensable for operation and understanding of the analogue modules of the PLC.

The board includes 2+2 inputs, at 4-20 mA and 0-10 V respectively, and 4 outputs at 4-20 mA/0-1-5 V, smoothly variable through potentiometer; the current voltage display is of digital type; the input indication is of bar type, through meters that can be switched.

Moreover, 4 outputs at 24 Vdc/1 A are available, internally powered.

The connection to the PLC can be carried out through terminals or connector.

Power supply: single-phase from mains.

Complete with educational manual and software.
