

Product Name :
Analytical Process Control Learning System

Product Code :
ENGLABINGCAG820003

Description :

Analytical Process Control Learning System

Technical Specification :

The Analytical Process Control Learning System process control simulator includes a tabletop workstation with a control panel, PLC interface, and industrial pumps, tanks, and piping. Learners will use these components to perform skills such as manually setting and controlling an electronic metering pump, testing the pH of a solution using pH test strips, and connecting and operating a continuous loop pH control system.

These analytical chemical process skills will prepare learners for industrial process applications that they'll see on the job.

Features of Analytical Process Control Learning System

- Continuous Stirred Tank Reactor (CSTR)
- PH Transmitter and Probe
- Piping By-Pass Network
- Injector and Metering Pumps
- Option: Advanced Analytical Control Module
- Optional Online eBooks
- Student Reference Guide

Engineering Lab Equipment India
