Product Name :
Dynamics Experiments kit

Product Code :
ENGLABINGCAG830007

Description :

Dynamics Experiments kit

Technical Specification :

Dynamics Experiments Kit is used for measuring various properties and effects of accelerating forces on inelastic and elastic collision, kinetic energy, masses and so on.
This kit comprises of instruments like force board, aluminum profiled trolley, cotton reel, ticker tape timer, spring balance and so on.

This kit is useful for developing various models of physics.

Advanced instruments of this kit enables one to understand flow characteristics of air and water, generated energy caused by their flowing and resting to name a few. This product has been designed to suit physics teaching needs of teachers and students as well.

We are an eminent supplier and manufacturer of Dynamics Experiments Kit.

Features

Easy to handle

Reasonable price

Precise design of instruments

Sturdy construction of kit

Engineering Lab Equipment India
