

Product Name :
Vacuum Pump

Product Code :
ENGLABINGCAG4500070

Description :

Vacuum Pump

Technical Specification :

Vacuum pumps are used for a number of applications concerning, above all, De-Airing systems of water. Water vapour sucked by the vacuum pump and mixed with the oil, producing emulsion, may cause serious damage to the pump when in notable concentration.

Vacuum pumps can also be fit with a Vacuum gauge with pin regulating valve and bleed valve as our model (see accessories) unless a similar gauge is not fit to the equipment to be connected as for example Large size pyknometer.

For this reason it is important, for such applications, to propose a suitable de-airing system as the Air drying unit filled with the Silica gel (dessicator salt) (see Air drying unit).
